

Gardening Tips From Our Members

Tips For Month of March

Plan to replace dying dogwoods with other flowering trees; ornamental cherry, nectarine, peach or plum.

Fertilize lawns; use slow-release organic rather than fast-release water soluble.

Plant spring annuals that can take some cold early in the month; plant heat lovers later or in April.

Some vegetables prefer cool soil; plant the summer vegetables - tomatoes, beans, corn, squash - late in the month.

These tips are from Marina Blomberg.
